Fairlawn Originations and Choice Standard Varieties

Grown by

Fairlawn Gladiolus Gardens

C. L. Goodrich, Proprietor

Luther, Iowa

JUL 1 1929

U. S. Department of Agriculture

TERMS:

Cash with order or 25% will hold the order until spring when the balance may be sent before shipment. No order accepted for less than \$1.00 All bulbs postpaid at prices quoted.

All bulbs of standard varieties one inch or more in diameter. The Fairlawn originations L. one inch or more, M. about $\frac{3}{4}$ inch and S. $\frac{1}{2}$ inch or more. I use great care in filling orders but mistakes occur sometimes, if you find any, when they bloom, not true to name, will replace them.

CULTURAL DIRECTIONS

Plant in good garden soil, in full sunshine if possible, in most soils three to four inches is best depth for large bulbs, smaller bulbs a little less, and about two inches for very small bulbs and bulblets. Plant about May 1st, about four inches apart in the row, cultivate after every rain as soon as the ground is dry enough to work good, and cultivate every ten days anyway to keep the soil fine.

Cut spike as soon as the first flower opens and let them bloom in the house in water. Leave plenty of foliage to insure a good strong bulb for next season. Dig any time after September 1st and leave them in shallow trays in the sun or a well ventilated room until dry enough to store in a cool dry place safe from frost.

FAIRLAWN ORIGINATIONS

Few Equal—None Better

ALBIA (2040) P. H. Good size. Color a combination of light and dark pink. 4 in 74 days.

Each, L. 10c M. 7c S. 5c
